

The 5th Coprocess User Group Meeting was held in Geneva 14th – 15th May 2009. We were delighted to have nearly 40 attendees from over 20 corporates attend our bi-annual meeting and by general consent it was a big success.

The main topics for the 2 day event was the presentation of the latest version, Coprocess.Netting 2.0 including breakout sessions on migration, reconciliation and the hosting platform. Case studies were given by Thomas Martin of ABB on Receivable Driven Netting at ABB and also by Svante Kandel of Treasury Management International on Outsourcing of the Netting. We thank them both very much for taking the time and for their excellent presentations. Sebastian di Paola of PricewaterhouseCoopers also spoke on Treasury Best Practice in Time of Crisis which was very well received. There was a dinner on lake Geneva hosted by Coprocess.
