

Coprocess adds Single Sign-On (SSO)

Coprocess SA is proud to announce an integrated **Single Sign-On** or **SSO** capability for secure authentication over the Internet. This is achieved using the XML open standard [SAML 2.0](#) protocol. This means that we now offer full Internet **Single Sign-On** authentication for hosted solutions as well as our **Active Directory (AD)** solution for Intranet installations. More on **Single Sign-On** can be found [here](#).
