

Coprocess held its 7th User Group Meeting for all our netting clients at the Hotel Barcarolle, Nyon, Switzerland. Our bi-annual User Group Meeting is a key event for Coprocess. We see this event as a great opportunity to improve and encourage two way dialogue between Coprocess and our clients.

Over the last two years we have not only added many new clients on board, we have also made many changes to what we offer and how we offer it. Demonstrations of the Coprocess Netting system latest features (the state of the art [reconciliation module](#) enabling upload of all open Accounts Payable and Accounts Receivable items from ERP system or systems on subsidiary level, [Vendor Payments module](#) with direct payment file transfer to bank/s) and many others adds on as well as client case studies were very well received and started an interested conversation about the future development of our Netting product.

Initial post-event feedback is very positive and we are already looking forward to the 8th Coprocess User Group Meeting which will take place in June 2016.

Read more about the event in [our blog post](#).
